

# FullStack.Cafe - Kill Your Tech Interview

---

## Q1: What is the Laravel? ☆

---

**Topics:** Laravel

### Answer:

**Laravel** is a free, open-source PHP web framework, created by Taylor Otwell and intended for the development of web applications following the model-view-controller (MVC) architectural pattern.

## Q2: What are some benefits of Laravel over other Php frameworks? ☆

---

**Topics:** Laravel

### Answer:

- Setup and customisation process is easy and fast as compared to others.
- Inbuilt Authentication System
- Supports multiple file systems
- Pre-loaded packages like Laravel Socialite, Laravel cashier, Laravel elixir, Passport, Laravel Scout
- Eloquent ORM (Object Relation Mapping) with PHP active record implementation
- Built in command line tool "Artisan" for creating a code skeleton ,database structure and build their migration

## Q3: Is there any CLI for Laravel? ☆

---

**Topics:** Laravel

### Answer:

PHP artisan is the command line interface/tool included with Laravel. It provides a number of helpful commands that can help you while you build your application easily. Here are the list of some artisan commands:

- php artisan list
- php artisan help
- php artisan tinker
- php artisan make
- php artisan -version
- php artisan make modal modal\_name
- php artisan make controller controller\_name

## Q4: Why do you prefer using Laravel? ☆

---

**Topics:** Laravel

### Answer:

- Simple MVC that can be extended easily
- Clean and secure routing
- Powerful Eloquent ORM for database
- Migrations
- Third party plugins
